

Моделирование одномерной системы Modeling and simulation of 1D system

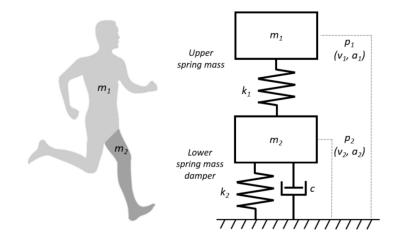

Имитационное моделирование Робототехнических Систем Simulation of Robotic Systems

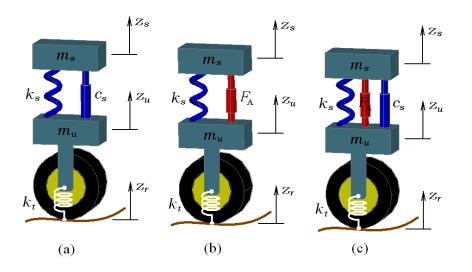

Ivan Borisov

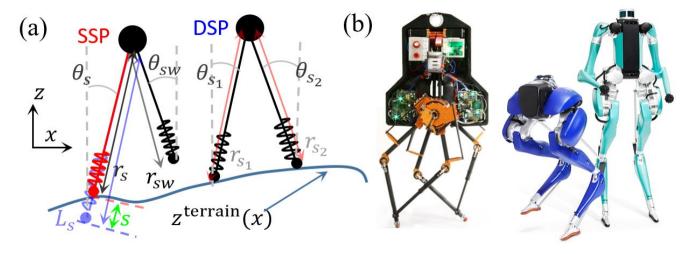

Practice task 1

Мотивация / Motivation

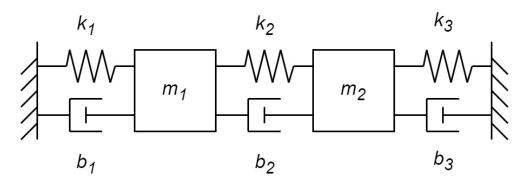

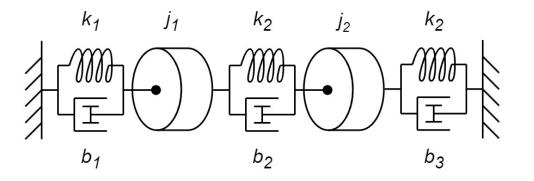

Варианты обязательного задания Variants of mandatory task

Система типа «0»

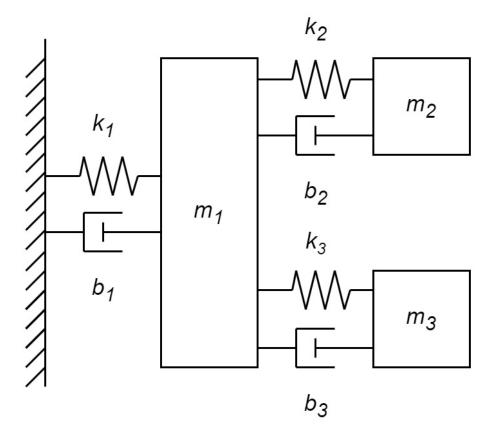

Schematic type «0»

Система типа «1»

Schematic type «1»

Дополнительное задание Extra task

- + 3 балла
- + 3 extra points

Задание

- 1. Вывести в аналитическом виде уравнение динамики системы
- 2. Собрать имитационную модель из блоков MATLAB Simulink
- 3. Собрать имитационную модель из блоков MATLAB Simscape
- 4. Сравнить поведений моделей посредством:
 - 1. Отклонения от положения равновесия тела x, 2x, 5x. Величина отклонения x выражена в метрах или радианах, значение выбирается самостоятельно
 - 2. Импульсного внешнего воздействия.
 - сила импульса воздействия 10 Н
 - длительность импульса 0,5 сек

Task

- 1. To derive the equation of system dynamics in an analytical form
- 2. Build a simulation model from MATLAB Simulink blocks
- 3. Build a simulation model from MATLAB Simscape blocks
- 4. Compare model behaviors by:
 - 1. Deviations from the equilibrium position of the body on x, 2x, and 5x, where value x is expressed in meters or radians, and selected by you
 - 2. Pulse external load
 - 1. the impact pulse strength is 10 N
 - 2. the pulse duration is 0.5 sec

Report. What is the must?

- Report in livescript
- Problem statement
- Relevant equation & description
 - Latex implementation
- Plots
 - Position and velocity of bodies
 - Spring and damper forces
 - Comparation between Simulink and Simscape models
- Reflection and Discussions

Отчет. Что обязательно?

- Отчет в лайфскрипте
- Постановка задачи
- Соответствующее уравнение и описание
 - Формулы в Latex
- Графики
 - Положение и скорость тел
 - Усилия пружины и демпфера
- Сравнение моделей Simulink и Simscape
- Размышления и обсуждения
